

Statement of Ethical Reviews

The journal is committed to promoting the ethical standard in research activities in the field of forensic medicine, and protecting lawful rights and interests of participants, researchers and users. The medical ethical requirements are described below.

(1) when research participants are humans, the author should explain whether its procedure complied with the ethical standards formulated by relevant committee (institutional, regional or national) responsible for human trials. The approval document of the committee should be submitted. Consent letter from research participants or their relatives must be obtained and the photocopies should be submitted to the editorial office. At the same time, the research should comply with the principles set forth in the Helsinki Declaration (2013 Edition) issued by the World Medical Association (WMA). For pictures of human body, the non-lesion parts should be omitted, covered or pixeled as much as possible. The name, address, identification, document number and other personal information of the research participants shall not be mentioned in the text.

(2) When reporting animal experiments, the study should comply with *Regulations on Experimental Animals* (实验动物管理条例), *Administration of Quality Control on Experimental Animals* (实验动物质量管理办法), and *Guidelines on Treating Experimental Animals* (善待实验动物指导性意见), and the photocopy of ethical approval documents should be submitted. Necessary information of experimental animals should be indicated in the article, such as variety, strain, sex, day or month age, weight, quantity, feeding conditions, modeling method and time, starting and ending point of the experiment, method of execution, etc.

Article title: _____

- The submitted article doesn't involve ethical review.
- The research passes all ethical reviews required by the journal (certificates are attached)
